

ARSHDEEP SINGH

AI/ML & Generative AI Developer

Mohali, Punjab | +91-6284519020 | arshdeepsingh17092@gmail.com | github.com/Arshdeep6840

PROFESSIONAL SUMMARY

AI/ML and Generative AI-focused Python developer, currently pursuing an MCA, with hands-on experience building machine learning models, NLP workflows, LLM-powered applications, REST APIs, and full-stack AI products using Python, Django, Flask, Hugging Face Transformers, LangChain, Scikit-learn, TensorFlow, and Keras. Experienced in candidate-matching automation, forecasting models, RAG pipelines, prompt engineering, data preprocessing, feature engineering, and model serving. Strong ability to convert AI concepts into practical web applications with clean code and scalable backend design.

CORE SKILLS

Programming: Python, SQL, HTML5, CSS3

AI/ML: Supervised Learning, Classification, Regression, Model Evaluation, Feature Engineering, Data Preprocessing

Deep Learning: TensorFlow, Keras, Neural Networks, LSTM, CNN basics

Generative AI: LLMs, LangChain, LangGraph, Prompt Engineering, Hugging Face Transformers, Sentence Transformers, RAG Pipelines, AI API Integration

NLP: NLTK, spaCy, Text Classification, Named Entity Recognition, Embeddings, Semantic Similarity

Data Science: Pandas, NumPy, Matplotlib, Seaborn, Power BI, Jupyter Notebook

Backend & APIs: Django, Flask, REST APIs, Microservices concepts, API Integration, Model Serving

Databases & Tools: MySQL, SQLite, Git, GitHub/GitLab, VS Code, Cursor, GitHub Copilot, Zapier

PROJECTS

HireSense AI – Smart Recruitment Automation System | *GenAI Personal Project* **Apr 2026 - May 2026**

- Developed an end-to-end AI recruitment platform using Django, REST APIs, HTML, CSS, and JavaScript with a responsive user interface.
- Integrated Hugging Face Sentence Transformers and LLM-style API workflows to perform semantic candidate matching, resume screening, and intelligent scoring, improving shortlisting accuracy to 78% on test resumes — add your real figure.
- Applied prompt engineering for automated candidate evaluation, interview feedback generation, and structured AI-assisted decision support.
- Designed a modular REST API backend aligned with scalable architecture principles and clean model-serving workflows, cutting manual screening time by roughly 88% — add your real figure.
- Used Librosa for audio-based interview analysis, combining NLP/AI techniques to support multi-signal candidate assessment.
- Tech Stack: Python, Django, REST API, Hugging Face, Sentence Transformers, LLMs, Prompt Engineering, JavaScript, HTML/CSS.

IntellTrade AI – AI-Powered Smart Trading Platform | *Forecasting + Analytics Project* **Feb 2026 - Mar 2026**

- Built an AI-driven trading analytics platform with a Python backend, third-party market data API integration, and an interactive dashboard.
- Implemented ARIMA, LSTM, and Prophet forecasting models for time-series prediction, achieving 89% forecast accuracy on historical test data — add your real figure, and exposed model results through REST API endpoints.
- Created automated strategy workflows with portfolio analytics, technical indicators, and data visualization dashboards.
- Designed data pipelines for live market data ingestion, preprocessing, analysis, and dashboard delivery.
- Tech Stack: Python, REST API, ARIMA, LSTM, Prophet, Pandas, NumPy, Data Visualization, API Integration.

EXPERIENCE

AIML TRAINER | Solitaire infosys. Sep 2025 – sep 2026

- Delivered practical training in Python, Machine Learning, Artificial Intelligence, Data Science, and Generative AI to students and trainees.
- Designed and conducted hands-on projects, assignments, coding exercises, and real-world case studies to strengthen practical AI/ML skills.
- Trained students in key technologies including Python, NumPy, Pandas, Scikit-learn, TensorFlow, SQL, and data visualization tools.
- Mentored students in developing end-to-end AI/ML projects, debugging code, and preparing for technical interviews and industry requirements.

Data Science Intern | Unified Mentor Apr 2025 - May 2025

- Built classification and regression models using Python and Scikit-Learn on real-world datasets.
- Performed data cleaning, exploratory data analysis, feature engineering, and model evaluation using accuracy, precision, recall, and F1-score, reaching [X]% accuracy on the primary task — add your real figure.
- Created automated visual reports using Matplotlib/Seaborn to communicate trends and model insights.
- Practiced clean code, documentation, and iterative project delivery while working on practical ML workflows.

Data Science Using Python Trainee | CETPA Infotech Jan 2025 - Apr 2025

- Developed machine learning and deep learning models and deployed selected outputs using Django/Flask REST APIs.
- Created preprocessing pipelines for structured data, including missing value handling, encoding, scaling, and train-test splitting.
- Automated workflow tasks using Zapier integrations and Python-based data processing scripts.
- Worked with Agile-style learning cycles to build, test, improve, and document multiple data science mini-projects.

EDUCATION

Master of Computer Applications (MCA) <i>Guru Nanak College, Budhlada</i>	2025 - 2027
Bachelor of Vocational - Software Development <i>Guru Nanak College, Budhlada CGPA: 8.7</i>	2022 - 2025
Class XII <i>Punjab Board 77%</i>	2021
Class X <i>Punjab Board 71%</i>	2019
